

LM GO Dashboard

Background

LM team has low real-time visibility for RM and AM related to last-mile orders thus many processes need to be more streamlined. LM team wants to give the Ground Ops team semi-real-time data visibility for orders that already arrived at the destination hub and some critical process data such as the aging parcels, attempt progress, and PETS ticket

Currently, the LM and Ground Ops team use the AASH report for monitoring orders at the destination hub that are only reported twice a day (in the morning and at the end of the day)

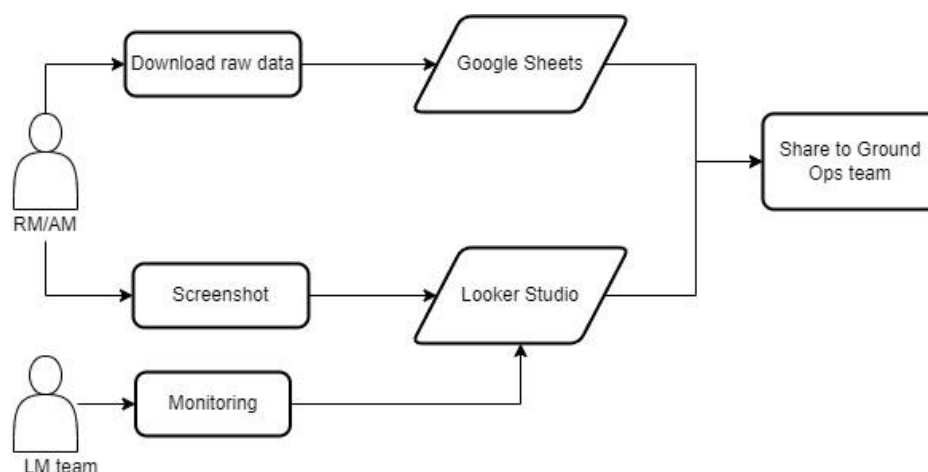

Data Processing Flow

Using Redash as the main data source, Python will pull data from a few Redash queries that were created, and then process all the data pulled from Redash queries into raw data. After raw data is created, Python will store it in Google Sheets as the data source for the dashboard.

Dashboard will read the Google Sheets file and convert the data into some visualization. This dashboard is set to automatically refresh every 2-4 hours to make it a semi-real-time dashboard.

Use Case

User for this dashboard are LM team and RM/AM Ground Ops team. For RM/AM they need to screenshot the dashboard and download the dashboard raw data in Google Sheets then share to the Ground Ops team for follow-up actions. For LM team, use the dashboard for order monitoring

Detail Parameter

LM team requested to show these parameters:

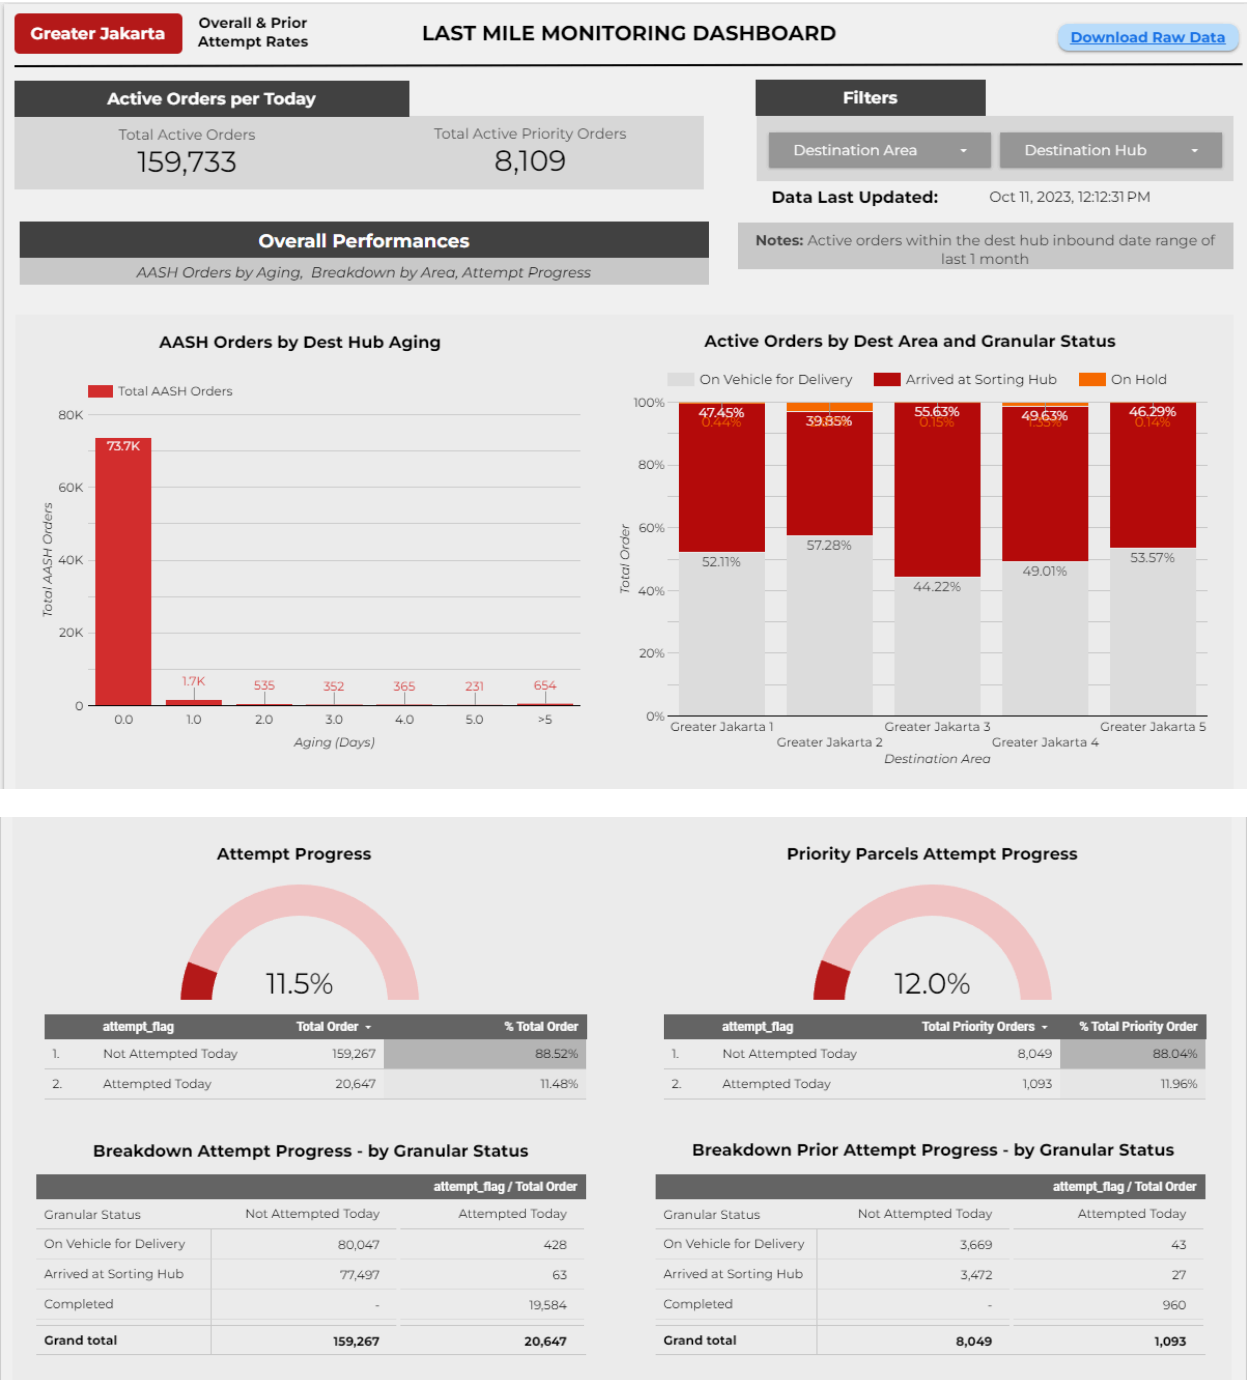

1. Active orders that already arrived at the destination hub, breakdown by destination area and destination hub (**current logic is using the intohub datetime, timestamp when the shipment arrives at the dest hub**)
2. Delivery attempt progress, breakdown by destination hub, and granular status
3. Priority parcels
4. Active PETS Ticket parcels, breakdown by destination hub

No	Parameters	Logic Explanation
1.	Active AASH orders	Orders with status 'Arrived at Sorting Hub', 'On Vehicle for Delivery' and 'On Hold'
2.	Parcel aging	Days aging parcels since arrived at destination hub
3.	Delivery attempt progress	% Total parcels attempted today per total parcels arrived at destination hub today
4.	Priority parcels	Parcel with PRIOR tagged
5.	Active PETS Ticket parcels	Parcel with active PETS tickets created (missing and damaged)

Dashboard Interface

Active Orders page

Attempt Progress

attempt_flag	Total Order	% Total Order
1. Not Attempted Today	159,267	88.52%
2. Attempted Today	20,647	11.48%

Breakdown Attempt Progress - by Granular Status

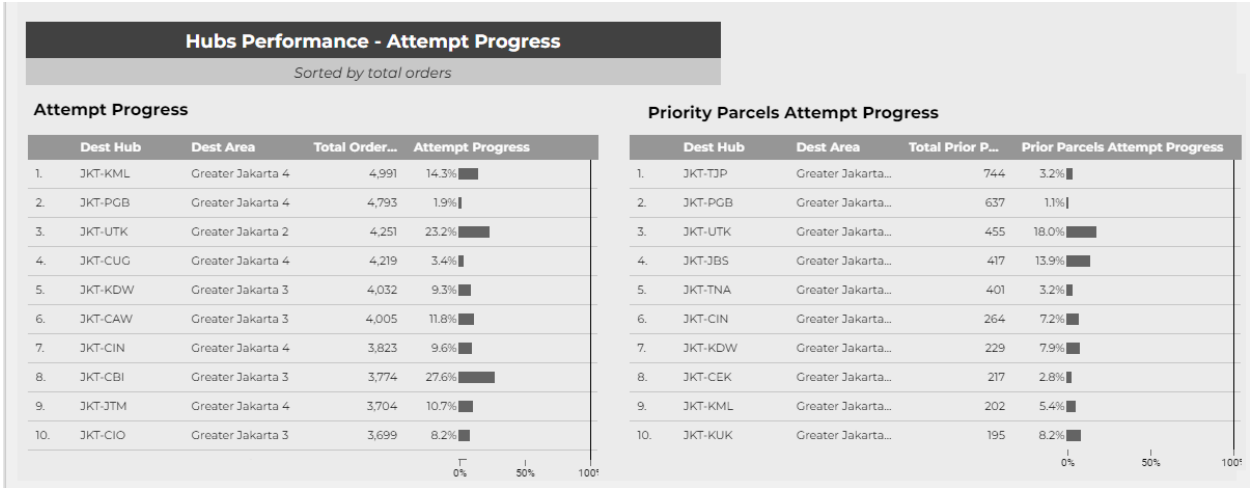

Granular Status	attempt_flag / Total Order	
	Not Attempted Today	Attempted Today
On Vehicle for Delivery	80,047	428
Arrived at Sorting Hub	77,497	63
Completed	-	19,584
Grand total	159,267	20,647

Priority Parcels Attempt Progress

attempt_flag	Total Priority Orders	% Total Priority Order
1. Not Attempted Today	8,049	88.04%
2. Attempted Today	1,093	11.96%

Breakdown Prior Attempt Progress - by Granular Status

Granular Status	attempt_flag / Total Order	
	Not Attempted Today	Attempted Today
On Vehicle for Delivery	3,669	43
Arrived at Sorting Hub	3,472	27
Completed	-	960
Grand total	8,049	1,093

Active PETS Ticket Orders page

Hubs Active PETS Tickets				
Urutan berdasarkan total PETS tickets, breakdown by tipe tiket				
Hub Name	Hub Area	MISSING	DAMAGED	Grand total
JKT-KOI	Greater Jakarta 1	139	-	139
JKT-TJP	Greater Jakarta 4	119	-	119
JKT-CIN	Greater Jakarta 4	92	1	93
JKT-TNA	Greater Jakarta 2	88	-	88
JKT-JBS	Greater Jakarta 2	75	-	75
JKT-PGB	Greater Jakarta 4	32	2	34
JKT-UTK	Greater Jakarta 2	24	-	24
JKT-JOO	Greater Jakarta 2	13	5	18
JKT-PML	Greater Jakarta 1	17	-	17
JKT-CEK	Greater Jakarta 2	16	-	16
JKT-KUK	Greater Jakarta 2	11	-	11

Appendix

LM Dashboard uses Local PC to execute, to locate the script file:

Open local PC > Desktop > LOCAL SERVER folder > LM Dashboard folder
